

The MINING BASICS GROUP of Canada

Next 2-day Course: Sun. 30 Nov. – Mon. 1 Dec. 2025

BASICS of GEOLOGY, MINING, and MINERAL PROCESSING

Professional Development Seminar for the Investment Community, and others

The only complete Geology, Mining, and Mineral Processing short course taught by professionals in each field

MINING BASICS GROUP: Boyd Davis Ph.D., David Love Ph.D., and George McIsaac P.Eng. Ph.D.

Highlights

- ◆ **Mineral Deposits**
- ◆ **Fundamentals of Exploration**
- ◆ **Resource Estimation & Reporting**

- ◆ **Mining Methods**
- ◆ **Mineral Processing & Metal Extraction**
- ◆ **Due Diligence, & Case Studies**

The objective of the course is to provide the students with an understanding of the industry-specific terms, methods, processes, the linkages between them, and the ability to better assess the technical risks in the minerals and mining sector.

This course is intended for people who are interested in a broad overview of how the mining business works from a technical perspective.

Aspects of Geology, Mining and Mineral Processing will be addressed in the context of the discovery of mineral deposits, development and mining of ore, and production of metals.

For people with no specialized background in geology or mining, the course provides a basic introduction of the critical technical factors impacting on the success of mining companies.

For those with some technical expertise, the course will serve as a refresher and as a way to integrate their specific knowledge into the broader aspects of the mining sector.
